

Terasaki Project Reference: Belokamenka Retrofit

Client:
Oil Tanker "Belokamenka" Ltd

Project:
Emergency distribution board retrofit

Location:
Murmansk city, Russia

Oil tanker "Belokamenka" is the biggest in Russia, it can load up to 360,000 tons of oil products.

"This operation shows that Terasaki products can reliably protect personnel and energy users not only in the average environment, but in rough sea conditions with constant working process."

-Alexey Pischur, Azbuka EI

In March 2012 Azbuka EI completed a complex renewal of the emergency distribution board on the "Belokamenka".

Work was done in three stages: disassembling of an obsolete Terasaki breaker type (AH16B, produced in 1979, which was still in working order), installation of the TemPower 2 circuit breaker and testing distribution board in all modes.

All works were done in one day which allowed the renewal of distribution board without disrupting terminal's working processes.

Old type breaker AH16B in the panel

Belokamenka Facts

- Replaced ACB: AH16B, 1979
- New ACB: TemPower 2 AR216S
- Total work time: 1 day

New TemPower2 installed
